Subject: Multitec-1

Mr Ben Barnes

I have received the result of the analysis of air where Militec-1, described as a hydrocarbon lubricant, has been added to the compressor sump oil at a 24ml / 400 ml oil ratio. The air sample did not have a nauseous or objectionable odour and the analysis showed the routinely tested contaminants were below the maximum allowable concentrations routinely used for such tests. Consequently on the information provided I have no objection to Multitec-1 being used in such situations.
