Dear Alan:

Thank you for giving me a bottle of Militec-1 metal conditioner. It has increased my speed in my racing wheelchair by 1 mile an hour at least, and downhill by up to 3 miles an hour. Since entering world class competition in wheelchair racing, I needed a little edge. I discovered by taking the seals out of my wheels and digging out all the grease, replacing it with Militec-1, and then putting the seal back, I had a freer rolling wheel.

With the help of Militec-1, I succeeded in taking third in the world in the World Championships in Holland on July 24, 1990. On August 11, I competed in the Moscow Marathon and won that, and then went to Gdansk, Poland and won the half-marathon on August 15. I leave for Caracas, Venezuela August 29 for the Pan Am Games and hope for the same success that I had the three past races.

I have passed the oil to a few of my fellow competitors and they have noticed the same improvements. I have to be careful about sharing my go-fast tips. Thanks again for passing this product to me.

Sincerely,

/s/

Kenny Carnes

Gentlemen,

It was my pleasure meeting you at the Rockville, Maryland Rotary race in August of this year. I have been racing wheelchairs for the past 15 years and I have had my share of success. But it was not until I started using Militec-1 metal conditioner that I realized the true potential of my equipment.

In the past, because of the type of road racing I do, I would go through at least three sets of sealed wheel bearings in a year's time and, needless to say, that got rather costly not to mention time consuming. After using "Militec-1", I have found that when I inspect my wheel bearings, or for that matter any moving part of my racing wheelchair or my everyday wheelchair, replacement parts have become almost a thing of the past. In addition, I have noticed a remarkable increase in my overall speed during training and especially during a race.

I highly recommend "Militec-1" metal conditioner to every wheelchair athlete I encounter. I am convinced that your product is the best on the market and that I will continue to use it until you develop a better one.

Sincerely,

/s/

Larry Binger
